

DEEP CREEK WATERSHED MANAGEMENT PLAN

Molly Ramsey,
Watershed Coordinator,
Dept of Planning,
Garrett County Government

WHAT IS A WATERSHED?

WHY A WATERSHED MANAGEMENT PLAN?

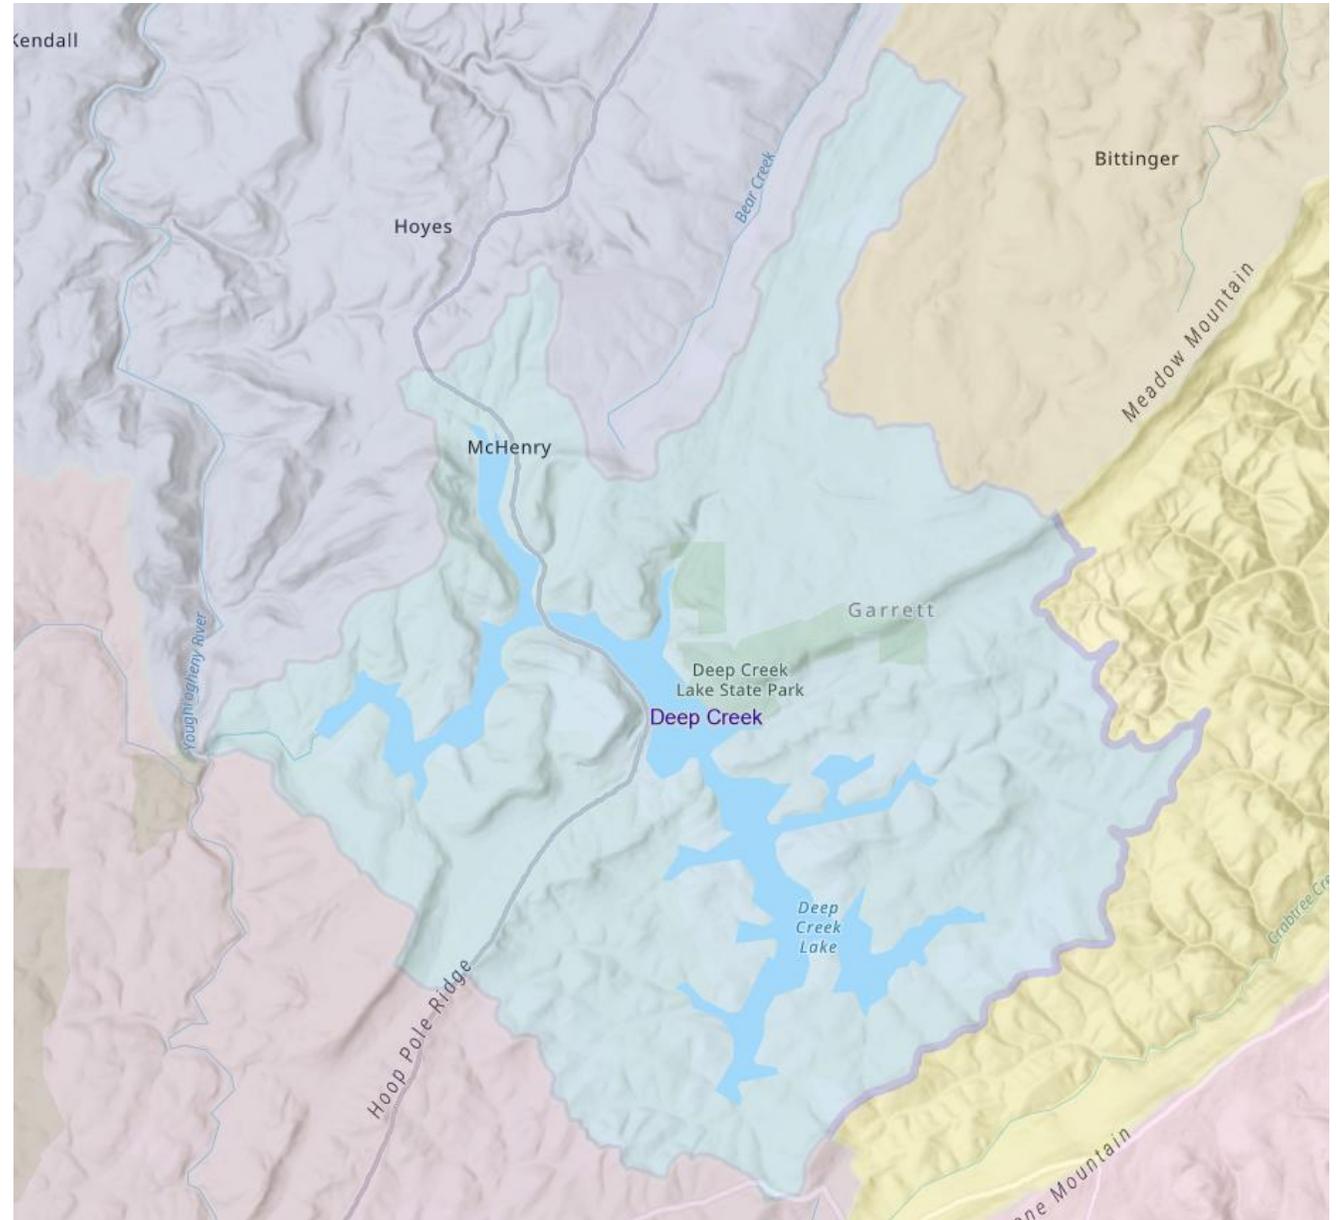

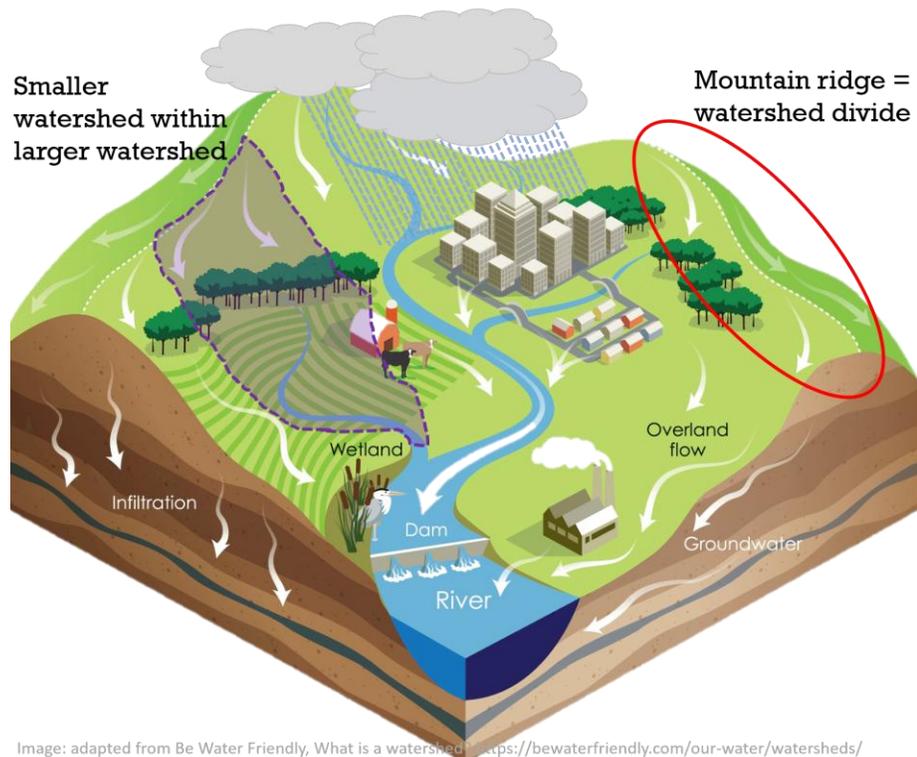

Image: adapted from Be Water Friendly, What is a watershed? <https://bewaterfriendly.com/our-water/watersheds/>

DEVELOPMENT OF THE PLAN

Issues of Concern

Accountability, agency coordination, public understanding

Water quality (sedimentation, SAV, and others)

Impacts from growth (incl. recreational uses of watershed and lake)

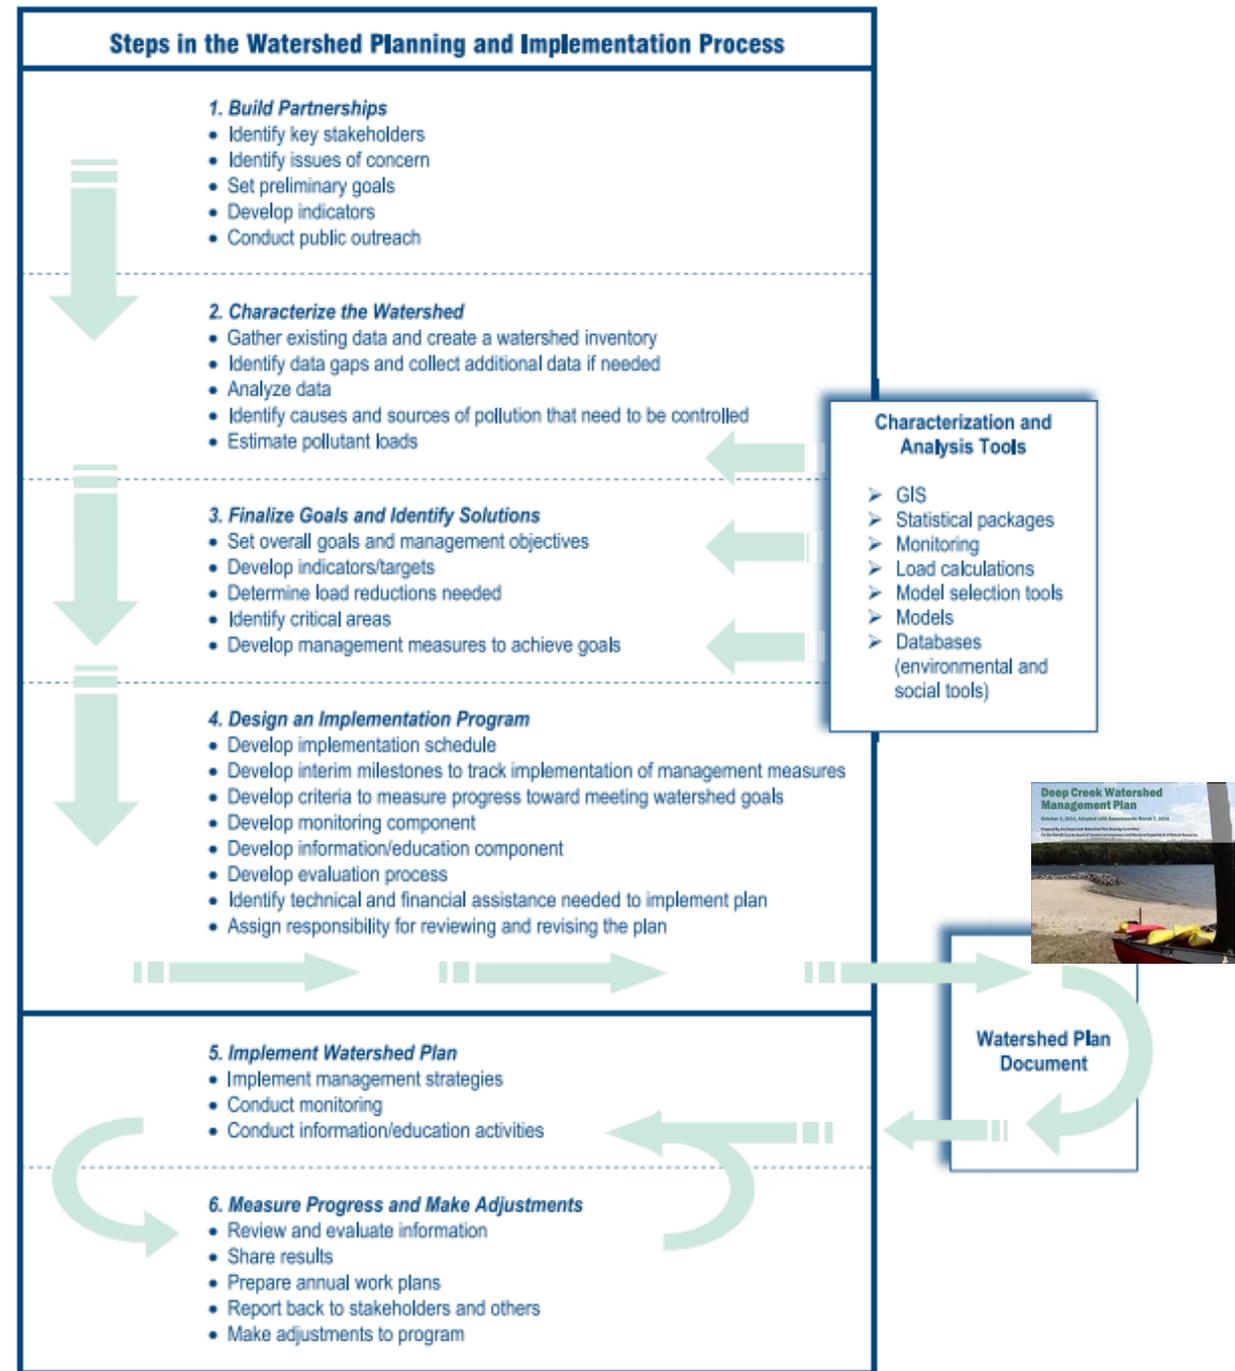

Lake levels

Vision

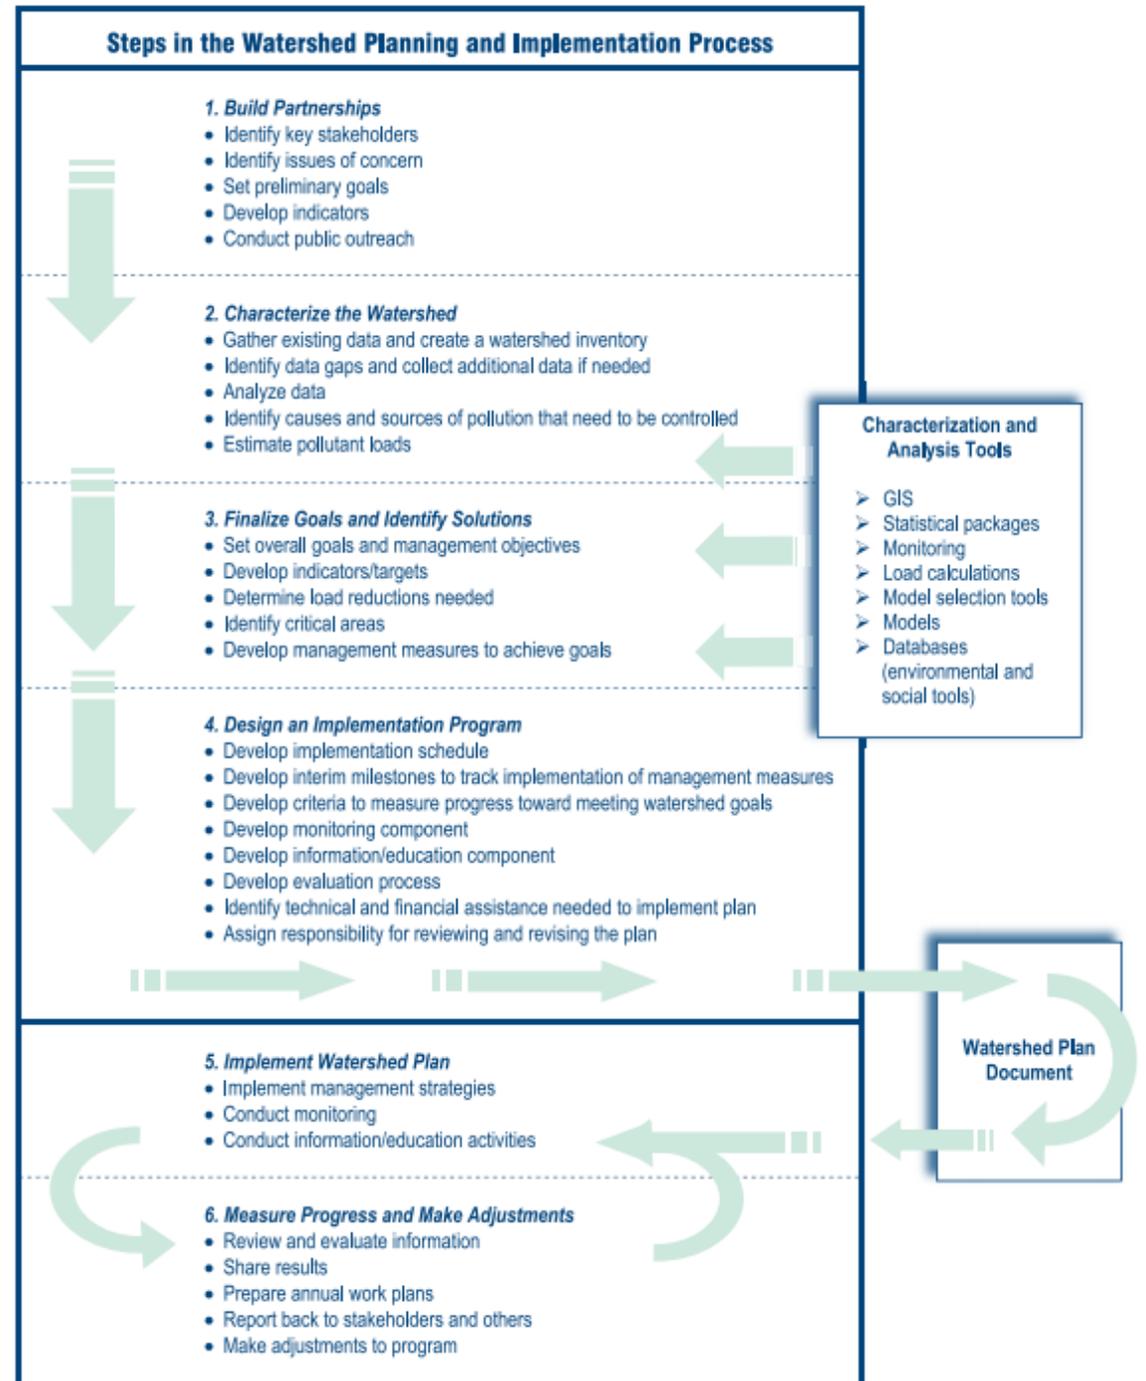

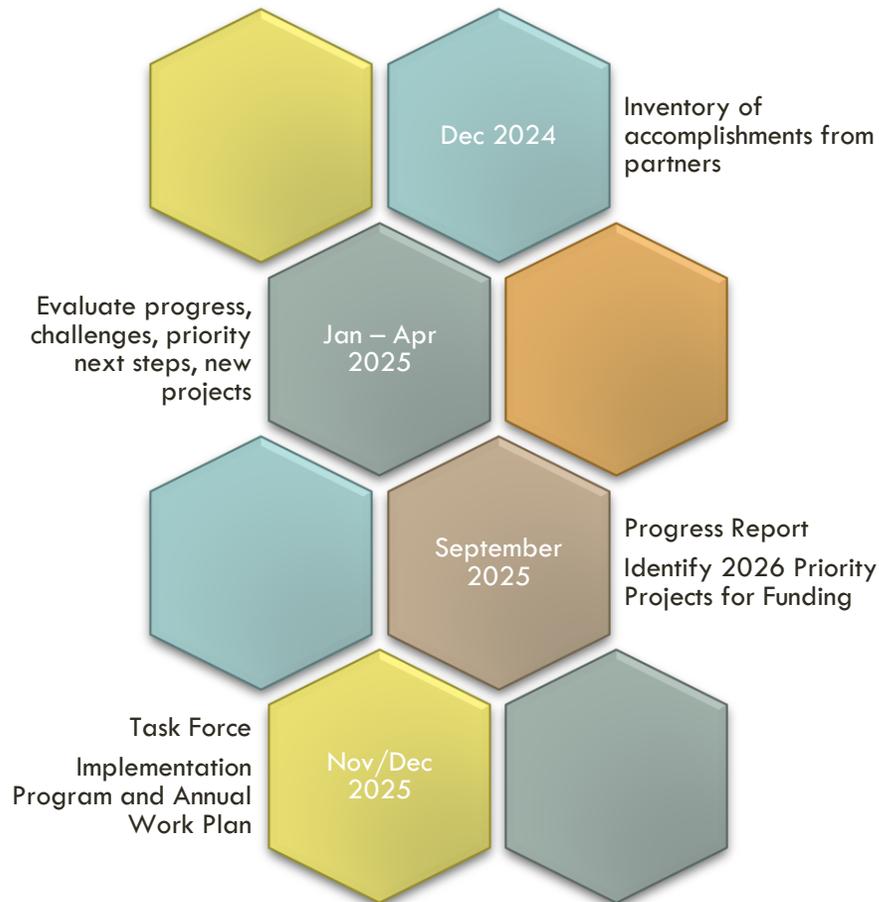

“Through partnerships with private landowners and government agencies, the Deep Creek watershed will improve its environmental stability and economic viability while retaining its rural landscapes and natural beauty so that, for generations to come, local citizens and visitors have a special place to live, work, and play.”

13 Goals

1. Management, Funding, Coordination
2. Educated and Informed Watershed Citizens
3. Watershed Data Collection
4. Manage Land Use
5. SAV manage for native, nuisance, & invasive species
6. Control sedimentation
7. Economic and Environmental Sustainability
8. Stormwater Management
9. Sewerage Management
10. Recreational Opportunities
11. Forest Retention
12. Lake water-level regulation
13. Access to navigable lake waters

MEASURING PROGRESS STEERING COMMITTEE

WATER QUALITY AND HEALTH PROTECTION

DNR and DCWF:

Publicly-available water quality data for coves, lake, and tributaries of watershed

Health Dept: safe swimming at DC State Park

MDE and DCWF: AMD treatment at Cherry Creek reduce acidity, iron, and aluminum

Section 319 NONPOINT SOURCE PROGRAM SUCCESS STORY Maryland

Treating Acid Mine Drainage Improves Cherry Creek

Waterbody Improved Abandoned coal mines contributed high levels of acidity and metals to Maryland's Cherry Creek, which flows into Deep Creek Lake. As a result, the Maryland Department of the Environment (MDE) added the Deep Creek Lake watershed, including Cherry Creek, to the state's 1996 Clean Water Act (CWA) section 303(d) list of impaired waters for pH. Acid mine drainage (AMD) mitigation projects were implemented in Cherry Creek, which now consistently meets the total maximum daily load (TMDL) goal for pH. In addition, acidity, iron and aluminum levels have declined.

Problem
Western Maryland's Cherry Creek begins near Savage River State Forest, flows about eight miles through a 7900-acre watershed, and empties into Deep Creek Lake (Figure 1). Outflow from the lake enters the Youghiogheny River, which is in the Ohio River Basin. The Cherry Creek watershed is composed of 69 percent woodlands and 12 percent wetlands, the remainder is mixed agriculture and developed lands. Deep Creek Lake is a manmade recreational impoundment that is popular for fishing and boating.

The name Cherry Creek can be traced to the waterbody's deep reddish color, which was historically caused by bog tannins from sphagnum wetlands. These wetland complexes include coniferous forest and marshes, and they contribute natural organic acidity to the stream.

In the 1920s Cherry Creek was a natural trout stream.

Figure 1. The Cherry Creek watershed is in western Maryland.

Filter Stations Change Year

DPR0021 - Deep Creek Lake - Dam

Lake Mainstem Station Description:
This is a Lake Mainstem Longterm Monitoring Station, located at river mile 2.1, N of Slide Hollow, 0.4 m above spillway at deepest point, adj to 299 Skippers Point Rd.

Station Depth: 71.2ft (21.7m)

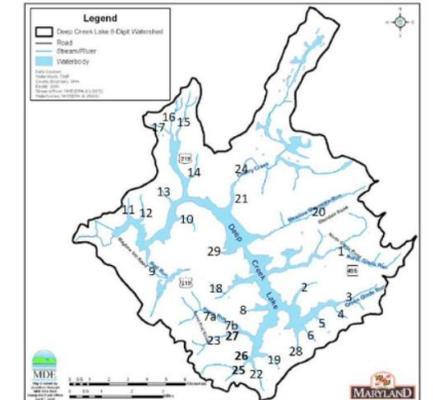

Current Data vs. Long-Term Results:
Dissolved Oxygen / Secchi Depth / pH / Water Temp. (C) or (F) / Conductivity / Nitrogen / Phosphorus / Chlorophyll /

Bottom Dissolved Oxygen (mg/L)

Month	Range 2009 to 2024	2025	Mean 2009 to 2024
Jan	10-11	10	10.5
Feb	10-11	10	10.5

LAND STEWARDSHIP, EROSION REDUCTION AND HABITAT GAINS

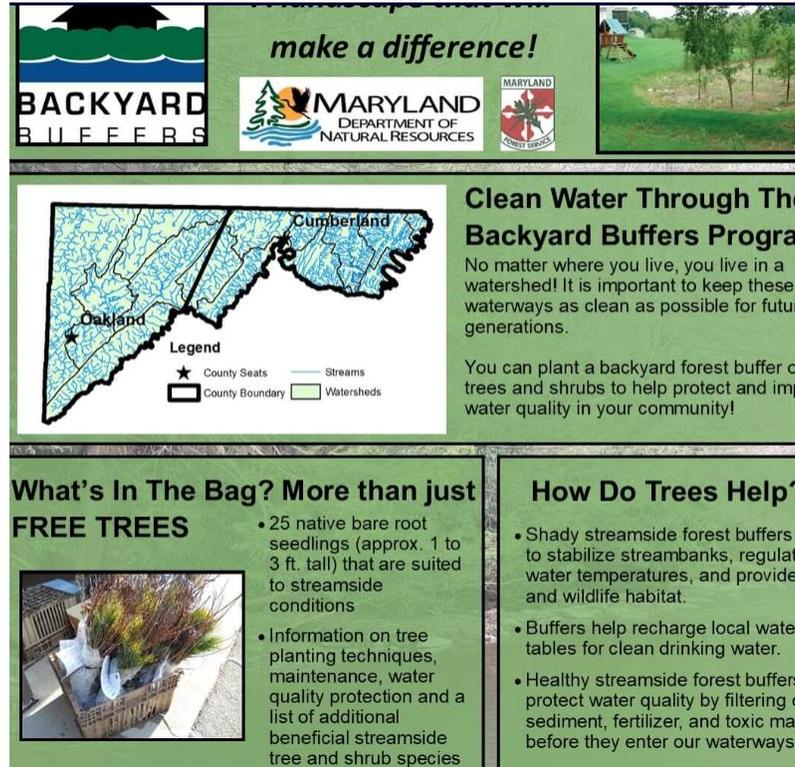

DCWF, DNR, UMd Extension, POA:
Reforestation lake buffer filtering runoff and stabilizing shoreline, 10in10

DNR and POA:
Filtering runoff to streams and lake, Backyard Buffer program

DCWF, POA, UMD-Extension:
Reducing erosion, reduced peak storm flows, rain gardens/barrels

UMD-Extension:
Reducing erosion and runoff, local models for best management practices for land management; WaterWise

DNR:
Expanded canopy, habitat, and resilience on public and private lands; forest Stewardship plans and plantings.
64 plans covering ~7,400 ac (~18% of watershed); 43,225 trees

BACKYARD BUFFERS *make a difference!* MARYLAND DEPARTMENT OF NATURAL RESOURCES

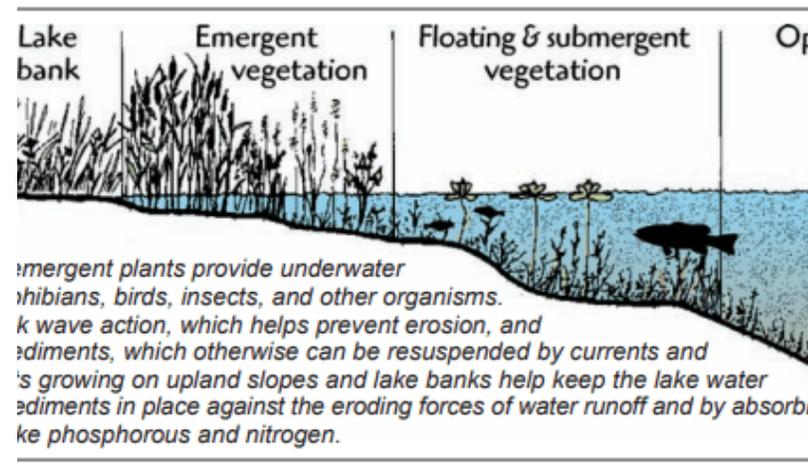

Clean Water Through The Backyard Buffers Program
No matter where you live, you live in a watershed! It is important to keep these waterways as clean as possible for future generations.
You can plant a backyard forest buffer of trees and shrubs to help protect and improve water quality in your community!

What's In The Bag? More than just FREE TREES

- 25 native bare root seedlings (approx. 1 to 3 ft. tall) that are suited to streamside conditions
- Information on tree planting techniques, maintenance, water quality protection and a list of additional beneficial streamside tree and shrub species

How Do Trees Help?

- Shady streamside forest buffers help to stabilize streambanks, regulate water temperatures, and provide wildlife habitat.
- Buffers help recharge local water tables for clean drinking water.
- Healthy streamside forest buffers protect water quality by filtering out sediment, fertilizer, and toxic materials before they enter our waterways.

Water-Wise

Voluntary program that allows property owners to be recognized for implementing best management practices in their lawns and gardens. Landowners can help reduce pesticides, improve water quality, provide wildlife habitat, and much more! Check the yardstick and see if your property measures up to 36 inches! Once certified, you will receive a small aluminum sign to display.

SHORELINES, SEDIMENT, AND NAVIGATION

10in10, Backyard Buffer, Forest Conservation Plans...

DNR:
SLPR-funded shoreline cost-share program lowering private barriers for shoreline stabilization ~ 1000 feet of rock armor installed

DNR:
Erosion studies guided demonstration project for cove dredging

DNR:
Arrowhead dredging restored navigable depths and improved habitat; roadmap for future projects

DNR:
Permitting and incentives for shoreline protection streamlined and buffer-strip maintenance responsibilities of private property owners clarified

AQUATIC VEGETATION & INVASIVE SPECIES

DNR:

- Survey of SAV drone (2023)
- Timely hydrilla control constrained spread in key coves; posted MSDS improved risk communication.
- Options testing for treatment of nuisance SAV; Mechanical removal pilot study

DCWF, Garrett College NWRT, and Brookfield Renewable:

Reduce and prevent aquatic invasive species (hydrilla and zebra mussels) risk at state park boat ramp; Launch Stewards

DNR and POA:

Investigation and education of nuisance SAV treatments; Nuisance SAV Removal Workshop 2024

**WATER
ALLOCATION
OPERATIONS,
RULES, AND
ADAPTIVE
MANAGEMENT**

Clearer rule-band expectations balanced ecological and downstream needs

Operational flexibility (within permit) enabled project windows (e.g., dredging)

MANAGEMENT, FUNDING, COORDINATION, & ACCOUNTABILITY

Governance, coordination, and transparency

- Memorandum of Understandings DNR, MDE, and Garrett County committing to management plan implementation
- Full-time Watershed Coordinators, active Administrative Council, and now Steering Committee meeting regularly (launched Dec 2024)
- Policy & Review Board meetings, important public forum and public-private partner management of lake

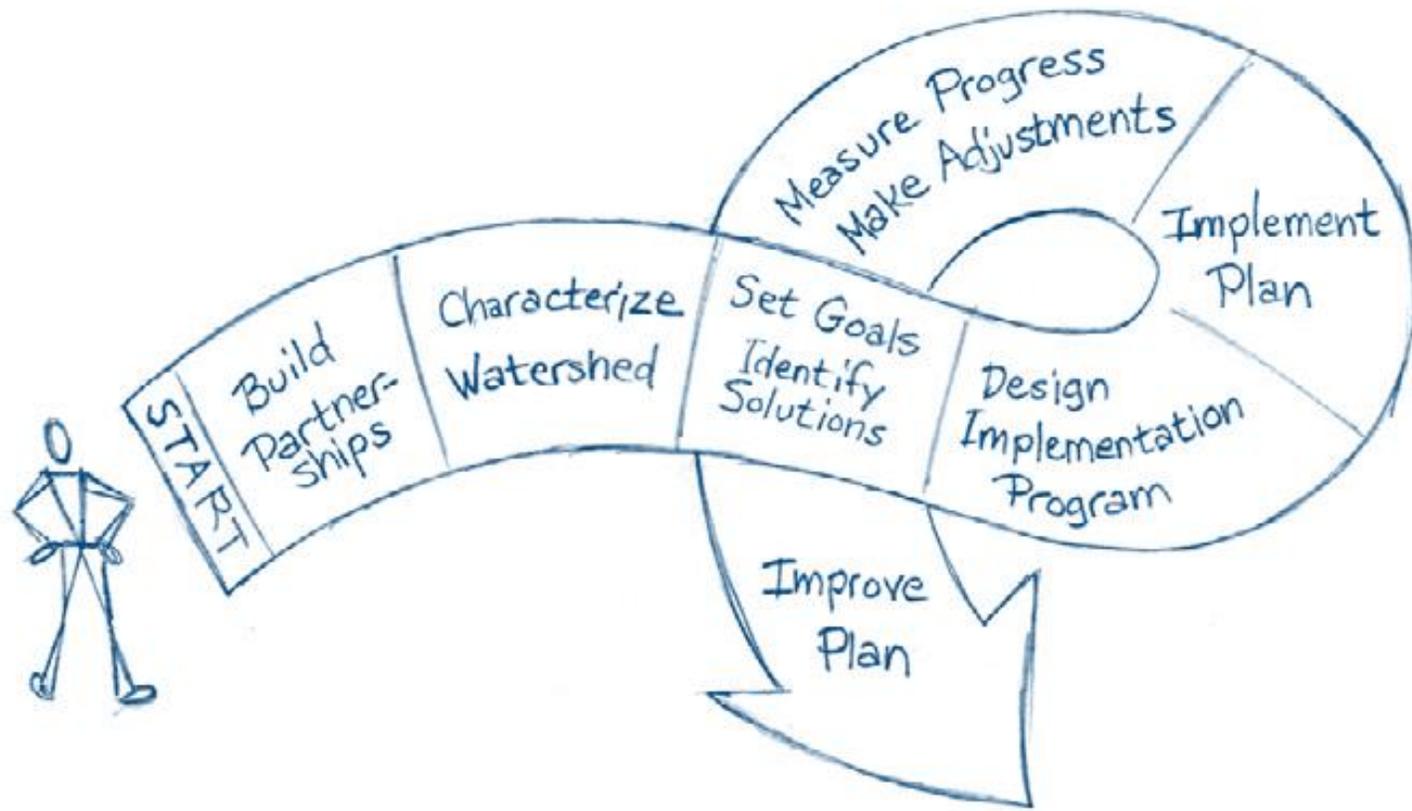

Funding

- State Lakes Protection and Restoration Fund (SLPRF) supported multiple Deep Creek projects
- Deep Creek Watershed Foundation (DCWF), POA, and donors investing in lake health (shoreline erosion, stormwater management, invasive species, water quality monitoring, and education)

RECREATIONAL OPPORTUNITIES

Access, recreation, and education

- Better maps, signage, and access points improved safe, informed use of the lake.
- Trail and facility upgrades enhanced visitor experience and stewardship.
- Education programming

EMERGING CHALLENGES AND OPPORTUNITIES

Increasing temperature

Intensity of storms

Increasing frequency and duration of drought

Invasive species
